THE AMERICAN AIR FORCES, Vol. 1, No. 4. Printed and published at 4600 Diversity Avenue, Chicago, III. Editorial office, 420 Lexington Avenue, New York 17, N. Y. Contents copyrighted 1955, by Vincent Sullivan. Printed in the U.S.A. Address all correspondence to: The American Air Forces. Room 1823, 420 Lexington Avenue, New York 17, N. Y.

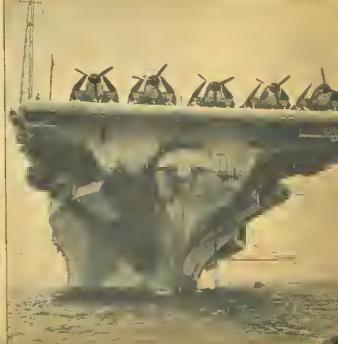

WESTWARD ROLL THE CARRIERS, DEATH ON Some of them must seem like ocean ghosts to the Nipponese who meet them, because they are named Lexington, Hornet, Saratoga—and these are the names of carriers the Japs know are sunk and buried forever beneath the grim Pacific. The planes they carry bear ominous identification too: Hellcats, Helldivers, Avengers. There are too many of them for the desperate men of Nippon to destroy and their number is ever increasing. Planes and carriers, striking more and more boldly, steadily drawing closer to Japan itself. Sombre portents, these big floating airbases always herald coming events—gloomy

DECK AND DEATH BELOW, DEATH FOR JAPANI events which the Japs dread—for the carrier forces are the spearheads of invosion! So, on February 16, 1945, the Nipponese war lords trembled when aircraft of the faunous Task Force 58 suddenly swarmed over Tokyo, striking right and left at tree-top level, blasting airfields, damaging factories, sinking ships, destroying lundreds of planes in the air and on the ground. And this awful blow was no mere "thirty seconds" affair: the hard-hitting American carriers were still off the coast on the following day, their planes were still striking savagely. It looked like D-Day for Japan. But it wasn't, not yet. It was Imp Jima!

HEAVY SEAS. This carrier protects her planes from high winds with barriers on the flight deck.

HORNET. Replacing the famous carrier that bore that gallam name, the Hornet sits for a portrait.

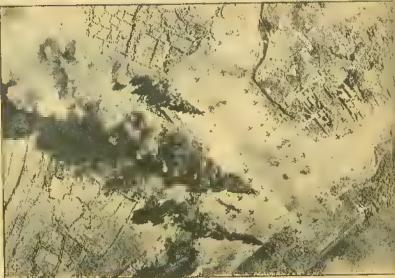

HIT AGAIN, but good was Iwo Jima, as this Army Air Forces picture clearly shows. 7th Air Force bombardiers said that the planes parked on the bomb-pocked air strip were "like fish in a barrel . . ."

GRIMLY RELENTLESS, the American hammering went on, day after day without a break. For seventy consecutive days, bombs fell on Iwo, smashing at its airfields and installations. From the sea and from the air, the mighty arms of America failed this tiny island which is only five miles long by two miles wide at its extremes. Then, when the time was ripe, the great flat-tops moved forthwest, sailing toward Japan

SWARMS of planes descended upon Japan, stunning the Nipponese with their sudden appearance, their numbers, and the violence of their attack. Here are Hellcats on the way.

HELLDIVERS roared over Nippon, and Grimman AVENGERS thindered across Tokyo Bay. It was a catastrophic blow. But, 750 miles away, doom was moving towards the main American objective—Iro Jima . . . !

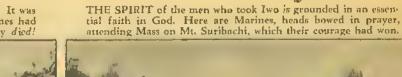

THE MARINES hit Iwo on the heels of the diversionary attack on Tokyo. The Joint Chiefs of Staff wanted the island, so . . .

TOUGH MEN, like this Leatherneck in Iwo's interior, went out and took it . . . !

DANTE'S INFERNO had nothing on lwo. It was the most savage and costly battle the Marines had ever fought. The Japs died hard—but they died!

# The Seven Angels VER 1800 years ago, St. John the Apostle prophesied what would happen to the crew of a Flying Fortress returning from a raid over Germany 1—Limping home with one motor chewed up by heavy flak, the Fly-ing Fortress Heavenly Body had to crash land in the Channel when two more motors quit. And St. John, in Chapter VIII of the Apocalypse, said: "And a great star fell from heaben . . 2-When the plane hit, it broke into three sections. The forward section sank almost immediately, carrying the pilot and the co-pilot to a watery grave. The other seven crew members managed to survive the shock of the crash and jumped free of the plane... 3. The seven survivors scrambled into a ru ber life raft and hung for dear life, thankful to be alive after their harrowing experience. And in the Apocalypse of St. John, these prophetic words were written: "And I saw seven angels standing in the presence of God

EN who fly are a clubby bunch. They like to join social organizations, especially of their own creation-and the screwier the better. There is the famous "Caterpillar Club," for instance; all you have to do to get into it is to have your life saved by a parachute. More recently, in New Guinea, "The Pedestrian Club of Papua" was formed, because so many airmen crashed in those jungled hills that the bush was always full of aviators, walking back to base.

Most notable today is the Society of the Short-Snorter, a world-wide "club" whose membership rolls contain the names of some of our tortured globe's highest-ranking personages-Presidents, Premiers, and Kings. As you might have suspected, the "Short-Snorters" Society started at the nearest bar. Airmen-pilots, navigators, and such-often met others of the sky clan in far-off places like Shanghai, Honolulu, Pago Pago, Cairo, and lesser way-stations. Quite naturally, the fraternal spirit of the men who ride the airlines of the world prompted a quick adjournment to the nearest brass-rail or cafe for (you guessed it!) a short snort.

To become a member-in-goodstanding of the Short-Snorters you can't be just any old plane traveler. No, you must prove that you have flown an ocean, the rules of the organization calling for "a non-stop flight of a thousand miles or more over water." (A nice technical point could be raised by an eccentric who elected to cruise back and forth for the required mileage in a helicopter above his own bath-tubl)

Proof of this qualifying flight must be attested to by at least two members-in-good-standing of the Society.

To each of these members the enrollee turns over one dollar, and a third buck is duly inscribed with the date, flight made, and other pertinent data. This third bill is kept as a membership card.

Of course, the new Short-Snorter can from that day on swear in any other eligibles, thus getting back his own dough and more.

But don't ever forget that "membership certificate!" Don't accidentally spend it in the corner ice cream parlor. Because, my pals-and it's a big BECAUSE—if you happen to be caught without your certificate bill by another Short-Snorter, it means you buy a round of drinks for the house, the price per drink anywhere from two bits to a buck, depending on the whim of the catcher and the class of the jernt into which this fellow member happens to drag you.

Starting with the original dollar, the Short-Suorter adds a bill from the currency of each country visited. Some of the original charter members have Short-Snorter certificates yards. long. One Army bomber colonel's string of Short-Snorter bills is so long he can wrap it around his abdomen five times-and does on the least provocation.

Your correspondent's own qualification for membership was accomplished on a four-day hop from Ewa Marine Air Station on Oahu, Hawaii, to Christmas Island, to Tutuila, American Samoa, to Naudi. Fiji Islands, to Tontouta, New Caledonia. Since then, the original bill has been lengthened by currency of the New Hebrides, New Zealand, Panama Canal Zone, Puerto Rico, Brazil, and, last but not least, the Gilbert Islands, where we picked up a few choice bits of Japanese "long green" on Tarawa.

It all adds up to a very interesting portable travelogue with which to impress friends and influence bartenders. And not only that, it's posltively an Open Sesame for those with autograph tendencies, because it makes the approach a dead cinch.

Take thirteen-year-old Jimmy Green of Forest Hills, Long Island. Out at LaGuardia Field one afternoon, Jimmy, one of the country's youngest Short-Snorters, spotted a plane-load of Army and Navy goldbraid which had landed and was just discharging its passengers. There were General "Hap" Arnold, Army Air Forces chief; Brigadier General Laverno G. Saunders, Deputy Chief of Staff for the AAF; Rear Admiral Emory S. Land, Chairman of the United States Maritime Commission, and several others.

Quick as a flash Jimmy dashed out and challenged them to produce their Short-Snorters. They had 'em all right, but Jimmy wound up with an impressive array of names on his own bill.

One Philadelphia groundling, Police Detective Lechter Carusthers, whose longest plane ride was of ten minutes duration fifteen years ago, became an honorary Short-Snorter by accident. He received a bill in change from a restaurant, inscribed: "Trans-Atlantic flight, 6/12/43," and signed by President Roosevolt, Henry A. Wallace, Cordell Hull, Wendell Willkie, and Winston Churchill

An Army captain reluctantly surrendered his one-dollar Short-Snorter bill to a Fort Washington Avenue newsdealer who couldn't change a twenty-dollar bill.

"He said he'd be back for it," stated the newsdealer, "-and I looked quick to see why. Do you know, it had the signatures of Antbony Eden, ex-Governor Herbert H. Lehman, Representative Sol Bloom, Adolphe Menjou, Carole Landis, Field Marshal Sir Archibald Wavell and a dozen or so others ...!"

And that's how Mike, the newsdealer, lcarned about the badge of membership in the Short-Snorters. And now, lads and lassies, you know.

# HEAL CAT in a HOTSPOT

FLAMING like a meteor, a Navy F6F approaches its carrier, the USS Compens, during operations in the Pacific, and in these spectacular Navy pictures the teamwork of carrier fire figliting units is dramatically demon-

As the blazing plane approaches, emergency squads standing by along the cat-walk prepare to go into action. Fire fighters in red caps, first aid men in green caps, are poised to scramble up the flight deck and perform their carefully rehearsed tasks of saving pilot and plane to fight again. But the situation looks desperate. . . .

The pilot, Lieut. Alfred W. Mageel Jr., USNR, of Pinsburgh, Pa., has cut his engine for a landing, but he is maware that the underside of his Grumman Hellcat's fuse large has burst into flame.

lage has burst into flame. To the waiting men below, there appears little hope that either pilot or plane can survive.

On the deck, engine stopped, pilot Magee, dragging his parachute, hot foots it along the wing of his blazing craft as the fire-fighting crews move into position.

Still carrying his 'chute, Lieut. Magee jumps to safety off the wing tip, and the fire-fighters go to work to smother the blaze with chemicals. The plane was saved.

1—DON'T LOOK NOW! Former pro wrestler, Don George, a Navy Pre-Flight instructor, sets out to attack an unsuspecting cadet in hand-to-hand combat demonstration.

2—BIBLE LESSON was taught when this steel-covered Good Book stopped a flak fragment that might otherwise have hit 8th AAF bombardier's heart.

3—SORRY, SALLY! Well painted but no lady, this Jap bomber, known as a "Sally," went up in smoke a few seconds after picture was taken—destroyed by the 5th Air Force's parafrag bombs, seen here just before they hit.

6—BAST MEBTS WEST in Ceylon, where turban-topped Tamile natives spin prop of American Vought Corsair, Lend-Lensed to British.

9-NYLON stockings on a girl's legs often stopped admiring males; now a ten-foot nylon glider drag parachute serves as a giant air brake to slow landing of this Waco CG-4A glider in a test landing at Clinton County Army Air Base, in Ohio.

10—BREAKING APART just back of the cockpit, a Navy plane goes over the side of a carrier on duty near the Philippines (left). One wing and the belly tank are still in the air as the other wing smashes in the catwalk. The pilot is in the cockpit, but he unbuckles his safety belt and swims clear of the sinking wreckage (right).

12—RESCUE MISSION of this Curtiss C-46 Commando was successful when its crew sighted two brothers who had been missing on ice-covered Lake Erie for more than 24 hours. The crew of the C-46 kept the brothers in sight and directed the operations of a Coast Guard rescue party from the American shore.

14—ALL WET but ready to dry up for the duration are these Jap airmen being fished out of the Pacific after having come out second best in air battles with Yanks.

AT THAT VERY MOMENT THE QUESTION WAS BEING ANSWER-ED ---

A CONVOY OF OVER SIX HUN-DRED SHIPS CARRYING OVER A QUARTER OF A MILLION YANKEE FIGHTING MEN WERE ON THE ROAD BACK TO THE PHILIPPINE ISLANDS.

9

### FLIGHT OFFICER JAMES W. KRANK

U. S. Army Air Forces

APPROACHING the industrial center of Tokyo or stalking a Japanese destroyer in the China Sea, the big B-29 is a center of feverish activity, but the bombardier, crouching over his bombardier, crouching over his bombardier in the "greenhouse," calmly and confidently makes his calculations.

Every member of the sky giant's crew has cooperated—perhaps struggled and achieved miracles—to get him there, but this moment belongs to him. Here, in a few swift seconds, he instinctively puts all his months of training to use, and as his bombs whine down and another Jap factory crumbles into dust or another Nip ship slowly settles to the bottom of the sea, this bombardier's thoughts go back to the day those shiny silver wings were pinned on his chest in the graduation exercises at the Big Spring Bombardier School.

The same feeling of confidence, hope and determination surged through him then. Twenty-four weeks in this, one of the largest

bombardier schools in the AAF Training Command, and a bombardier had a right to be proud of himself. It had not been easy and he had sweat out every day of those twenty-four weeks.

But it was worth it, he thought, and grinned as he recalled his initiation at this advanced training center. It was a G. I. haircut, and after he'd submitted to the operation, there wasn't a single lock longer than one-half inch.

Ground school classes in the maintenance and operation of the bombsight, theory of bombing, bombing analysis and the operation of the Automatic Pilot had made his days long and his nights short, and his brain had whirled as it tried to assimilate all the strange, new, specialized knowledge.

Although he had yearned to fly from the start, his altitude achievement during the first three weeks had been confined to the ten-foot platform of the movable trainers in the bombing trainer hangars.

Over the Tama River just west of Tokyo, a B-29 Superfort roots with a belly full of destruction for the capital of Nippon.

Perched on a ten-foot trainer with his instructor, this cadet learns the art of precision bombing, using a Norden sight to "bomb" the "bug" on the floor in front of the Another cadet acts as pilot on the trainer.

After a series of "runs" on the trainer, a cadet and instructor inspect the "hits" on the paper target atop the "bug." In this simulated bombing, the cadets learn to operate the bombsight before ever taking the air.

Here, in "bug bombing," he had made his first actual contact with the Norden bombsight. Between the movement of the trainer and the electrically-driven "bug" on the floor, he had been confronted with most of the problems that beset a bombardier in the air. Before he had finished the course he had spent forty hours at this form of simulated bombing.

His big moment had arrived when he took to the air in an AT-11 bombing training plane. His feeling, as the twin-engined trainer lifted from the run-way and climbed into the blue, had been one of safety and security engendered by the excellent record of instruction in the AAF Training Command.

In this school, which had graduated several thousand bombardiers in two years of operation, there had not been a single cadet fatality. During this period more than thirtysix million miles of flying had been accomplished --- the equivalent of circling the earth 1500 times.

Watching his instructor nonchalantly but deftly operating the sight, he had thought that a twominute bombing run-even at the outset of his training-was a long time. On subsequent missions, when he himself had taken over at the bombsight, he had found that he made more mistakes than he ever dreamed possible.

Usually there were two students and an instructor assigned on each mission, and while one student in the nose of the ship operated the sight and bombed the practice targets, the other was aft taking pictures of the bomb impacts. These pictures provided an accurate check on the student's progress.

Gradually, the patient teaching of his sometimes irritated instructors, many of whom had combat experience, began to show results, and more and more often his bombs had fallen closer to the calcimined square in the center of the 100-foot circular target, This "bullseye" was called a "shack"—a perfect hit—and several times, from 6,500, 8,500 or 13,000 feet, he had scored a "shack,"

He remembered the wonderful feeling he'd had-something like he felt just now, except then it was a sport and now it was a deadly serious business.

He began to fly missions without an instructor at his side, and near the end of his third week of morning

must have a working knowledge of all related equipment.

A group of cadets receive instruction in the operation of the bomb rack mechanism. Fledgling bombardiers must not only be able to use the Norden and other sights, but

Training bombs have been placed in their rack in an AT-11 and this cadet bombardier is making a final check before taking his place in the "greenhouse." He will pull cotter keys which will later permit the "eggs" to explode. He will pull

And now it's "Bombs Away" as this Big Spring Bombar-dier School cadet, crouched over his sight in the "green-house" of the AT-11 bombing training plane, aims his bombs at circular target visible on the Texas earth below.

High above the practice range on the West Texas prairie, the plane salvos its bombs as the young cadet bombardier throws his switches. This is only make believe, but every day it gets closer to the real and deadly thing.

bombing he imagined himself a "hot bombardier," so they graduated him to a four-week period of night flying. They started him on combat runs-about forty seconds' duration-and introduced him to the use of evasive action. That had come in pretty handy, especially today, when his pilot seemed to be dodging the plane around every burst of flak, and this "hot" bombardier quickly cooled off!

Then came the final stretchafternoon bombing. Using the tactics previously learned, he had found himself coping with the tricky air currents encountered under a hot Texas sun and sometimes, playing hide-and-seek with a target dlsappearing under the protective cover of afternoon clouds, he had decided clouds were formed just to plague a bombardier's life.

Throughout his days of flying, ground school teaching in subjects closely allied with his profession had continued, and one of these subjects, "Weather," covered in forty-two hours the equivalent of four semesters' instruction in college! Yes, his brain still whirled.

During his final weeks of training, he had studied pilotage, dead reckoning and sir plot navigation, for a bombardier must not only know how to bomb a target, but he must also be able to plot a course to the objective. On navigation missions within a radius of 300 miles of the home field, one cadet had directed the pilot to a town, wooded area or some other reference point, and then the cadet at the bombsight directed the bombing run to the target-a bridge, factory or rallroad some ten or fifteen miles away.

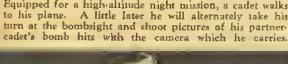

Of course, there were no bombs in the racks on these missions, for these practice targets were real American installations near towns and cities in West Texas.

It had been a long grind, and there was more to come. The rough edges had been honed off by combat training in a replacement training unit, and when he departed for an overseas station, he knew he had a proud heritage to uphold.

Graduates of his school, as in the case of many others, had won hundreds of Distinguished Flying Crosses, Air Medals, Purple Hearts, Silver Stars and Presidential Citations. Proudly they wore campaign ribbons from every theatre of combat.

Perhaps he, too, would receive one for this day's work . . .

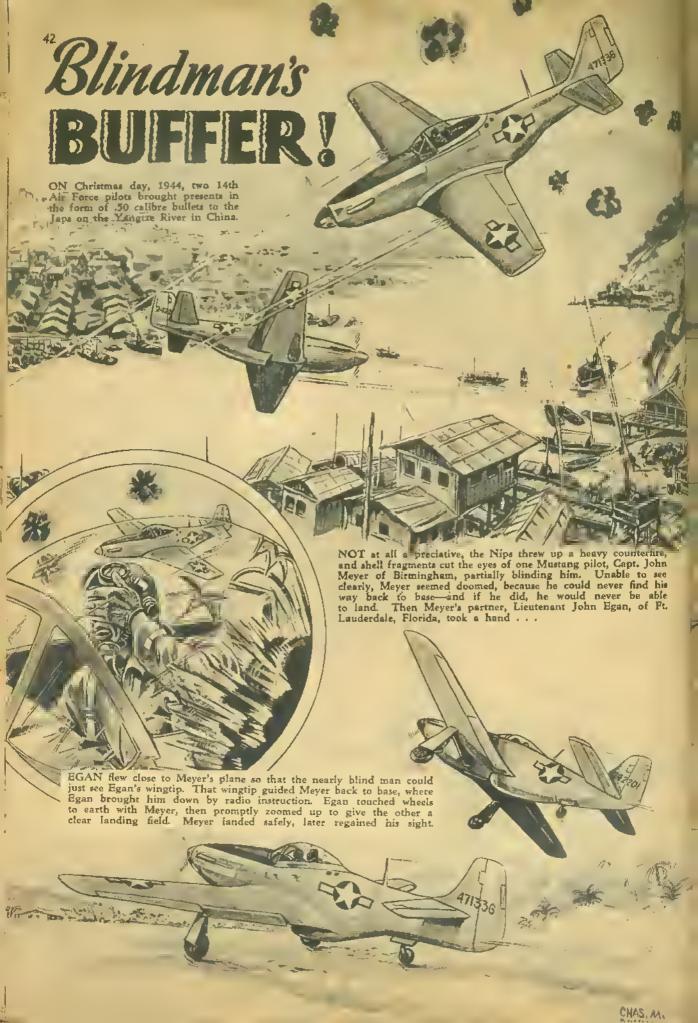

Equipped for a high-altitude night mission, a cadet walks to his plane. A little later he will alternately take his turn at the bombsight and shoot pictures of his partner-

Packing a .45 automatic, one cadet passes up a then secret bombsight to a fellow-student ready to take off in an AT-11. Until recently, the Norden bombsight was always shielded from view and closely guarded until airborne.

## TAPS

WHILE the guns of this torpedo plane were blazing away at the Japs in a recent Pacific action, an anti-aircraft shell from an enemy battery exploded in the turret, killing the rear-seat gunner. The pilot somehow managed to bring the badly damaged ship back to the carrier, where the Captain of the flattop made a quick decision, namely to commit the wrecked Avenger and the dead airman to the deep ocean tomb together

As the Chaplain delivered a brief funeral service (above), members of the flat-top's crew gathered reverently at the stern of the flight deck . . . .

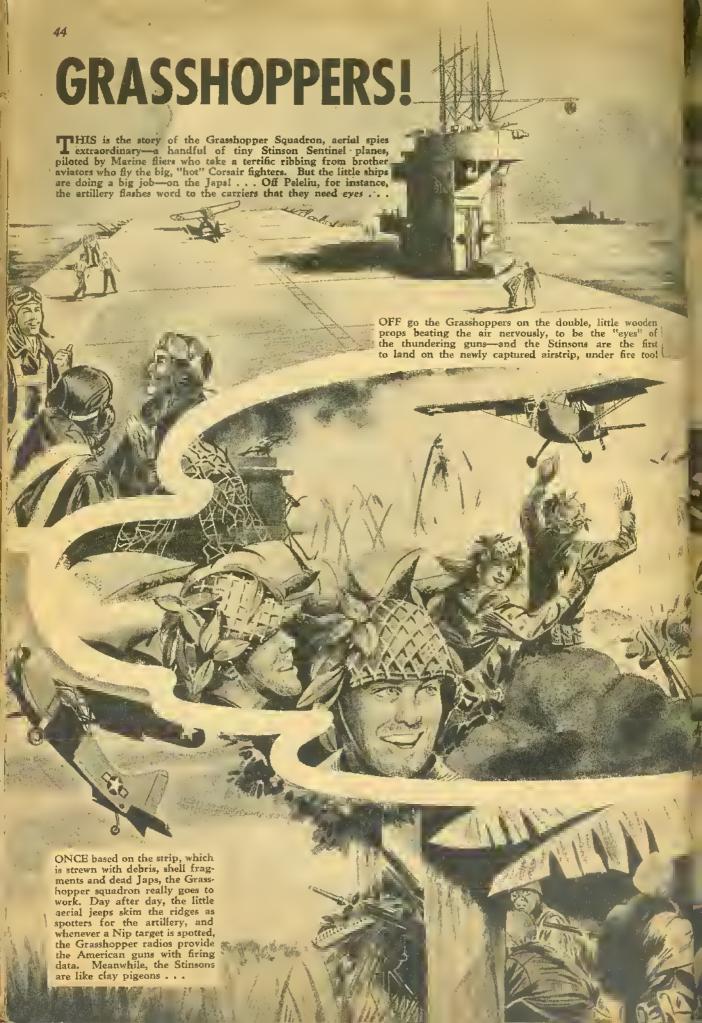

The carrier's Chaplain mounted the wing-root of the plane and there gave the last rites to the airman whose body rests at his post where he died . . .

Then the bugler blew the traditional funeral dirge of the armed forces, starting the final journey of plane and airman over the edge of the deck . . .

Rigidly at attention, the crewmen remained motionless, eyes following the remains of plane and gunner as the two sank beneath the quiet sea.

# OM HOW IT FEELS TO RIDE A BOMBER

over enemy country is vividly described in a letter to his brother by Second Lieut. William A. Levinson, 22, navigator of a B-17 Fortress Squadron of the 8th Air Force...

Dear Lee,

Just finished painting the 24th gaudy bomb on my gaudy jacket and I'm

kind of tired. Guess it's the flak that does it.

All the way into the target area we're keyed up with the idea of bombing and of staying out of flak while on course. Comes the I. P. (initial point of starting bombling run), and if we're following some other outfit on the target you can already see the flak over it. If we're first, Jerry always sends up a harrage ahead of us (a) to get the range, and (b) to scare us off.

There's always a tense, dreadful moment when we're barreling into it and anticipating the worst. In most cases this moment is the hardest of all, for once you're in the stuff there's no turning back. A high exhibaration runs through you as you see the black puffs float by without doing any damage. You feel like sticking your head out and yelling: "Ya-ya, Jerry, you're a punk shot! Confidentially, you stink!"

Just then there's a dull boom off the wing and black puffs scud along the window; a wild, harsh "ping-g-g-g" tells you Jerry ain't so stinko, after all, because

there's a hole in your plane somewhere now,

Suddenly you become aware that you're racing through space at a terrific rate. Up to that time your conception of movement has been limited to the slowly moving earth 25,000 feet below and the relatively stationary and dignified positions of aircraft ln your own formation.

Now the flak is scudding past the wings and back toward the tail at an alarming rate, and its very nearness highlights the speed at which you're tearing through lt. By this time you are almost to the target and all eyes are on the lead ship.

Nearer, nearer and nearer-still no "Bombs away!" You don't even notice the flak by now, though it's probably heavier and more accurate. The whole crazy kaleidoscope centers on that lead ship's bomb bay. One eye on it, one eye on the compass, one eye on the ground, one on the air speed, one on the altitude, one on your watch, one on the flak-you wish you had a thousand eyes!

There they are! Strung out and down like beads falling from a broken chaln, suspended motionless for a moment as if poised for the blow, then plunimeting

down toward the target. Bombs away!

Virgil (the bombardier) hits his switches and a second later Eric (the pilot) has the plane on its ear, swinging out and down to get away from the now suddenly present again flak. Seconds pass, while the flak booms ominously and

slowly thins away in front of you.

You look back gratefully and are startled to see the sky solid black with a wall of black puffs of dirty smoke and you wonder, "Did we actually come through that alive?" But there are others behind you and they are coming through too, so maybe it wasn't all a dream. The feathered props and clearly visible signs of battle damage throughout the formation are grim testimony that it was real. Jerry meant it when he aimed those .88's!

Well, at least we're out of it now and all we have to do is pick our way home through 400 miles of enemy air, staying clear of the other flak that waits below.

All this takes perhaps eight minutes to transpire and yet it is the most thrilling-most frightening-most glorious eight minutes a man can know, I believe. It is also the most fatiguing, although you remain as much at fever pitch on the way out, alert for any slips which might prove as fatal now as earlier.

Jerry would rather get you before you reach the target, but he won't turn you down coming out, either. At times like this the sight of our 8th AAF fighters cavorting above us or ranging far off to the sides to search out the Luftwaffe is the most reassuring in all the world to us. Every one of those guys is a hero-and a damned welcome hero, too.

It's only when you finally land in England and realize it's all over that you begin to know how mentally and physically exhausted you are. The artificial pitch of excitement has worn off and all that remains is the weariness and strain

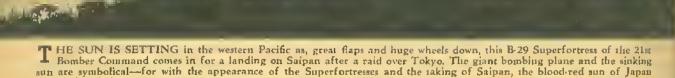

of a hard job well done. None of these missions is easy until you're back on terra firms, and then they're all "milk-runs." There's an Air Force saying that "The hard ones are ones you don't come back from."

Wanna hit the sack now. More tomorrow, maybe. Love.

BILL.

## SAIPAN SUNSETTERS

THE MARINES hit Saipan, in the Marianas, on June 14, 1944, and in twenty five days of bitter lighting took the vital island from the Japs, who defended it with fierce desperation. Then aviation engineers went to work, as shown in the picture to the right. Great steam shovels cut into this coral mountain to rip out half a million yards of white coral for the big bomber base being constructed on the island, and two and a-half-ton trucks lygged the crushed material to the airstrips and taxiways where it was pounded list and solid to support the great weight of the B-29s.

really marted down.

TOKYO knew the Snipan base was ready on November 24th, when scores of Superforts struck the Jap capital at high noon and remained over the frightened city for two hours. It was the first time Tokyo had felt American bombs since the Doolittle raid of April 18, 1942, and it was the first time the enemy's principal city had been hit by land based bombers. But it was not the last time. The newly created 21st Bomber Command established a fairly regular schedule of raids from Saipan, and with every raid the number and hitting power of the Superforts increased until all Ja-pan shuddered. Behind the bomb-ers was Gen. Heury H. Arnold, Commanding General, U. S. Army Air Forces, shown here on a surprise visit to Washington's Bolling Field, where he is bidding goodbye to B-29 men leaving for Saipan.

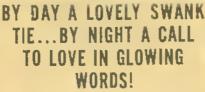

M APPING TROUBLE for the Japs are (above, left to right) Brig. Gen. Emmett O'Donnell, Jr., who bosses a wing of the 21st Bomber Command; Lt. Gen. Millard F. Harmon, head man of the AAF in the Pacific; and Brig. Gen. Haywood S. Hansell, Jr., Commanding General of the 21st.

CUT-UPS shown here duplicating their caricatures on their plane, "Waddy's Wagon" (below), are not furny to the Nips. Fifth Superfort to take off on the first Tokyo strike from Saipan, the "Wagon" was the first to return after lambasting the vital Japtargel.

MEN . . . BOYS . . . Now amaze your iriends! Surprise and thrill every girl you meet! Be different and the life of the party in any crowd! Here's the most amazing apeetaculas nerkile that you ever

wore, a smart wrinkly-proof, tallored gravat, which at night is a theilling separation! It's smart, roperb class by day, and just Imagine in the dark it seems like a necktir of compelling allure sheer magle! Like a miracle of light there comer a pulsing, glowing querilon-WILL YOU KISS ME IN THE DARK, BABY? Think of the sneprise, the awe you will eause! Three's no trick, no hidden betterier, no switches or loolish horseplay, but a thing of loveliness as the question emerges gradually to life, touched

## HOW JOE'S BODY BROUGHT HIM INSTEAD

I Can Make YOU a New Man, Too, in Only 15 Minutes a Day!

If YOU, like Joe, have a body that others can "push around"— if you're ashamed to strip for sports or a swim—then give me just 15 minutes a day! I'll PROVE you can have a body you'll be proud of, packed with red-blooded vitality! packed with red-blooded vitality!
"Dynamic Tension." That's the
seriet! That's how I changed myself from a spindle-shanked, scrawny
weakling to winner of the title,
"World's Most Perfectly Developed Man."

### "Dynamic Tension" Does It!

Using "Dynamic Tension" only 15 minutes a day, in the privacy of your own room, you quickly begin to put on muscle, increase your chest measurements, broaden your back, fill out your arms and legs. Before you know it, this easy,

NATURAL method will make you a finer specimen of REAL MAN-HOOD than you ever dreamed you could be! You'll be a New Man!

### FREE BOOK

Thousands of fellows have used my marvelous system. Read what they say — see how they looked before and after — in my book,

"Everlasting Health and Strength."
Send NOW for this book—FREE.
It tells all about "Dynamic Tension," shows you actual photos of men I've turned from puny weaklings into Atlas Champions. It tells how I

can do the same for YOU. Don't put it off! Address me personally: Charles Atlas, Dept. 792 115 East 23rd St. New York10, N.Y.

I want the proof that your system of "Dynamic Tension" will help make a New Man of me — give me a healthy, husky body and big muncular development. Send me your free book, "Everlasting Health and Strength."
